
New project on BRIdging SErvices, Information and Data for Europe (BRISEIDE) launched.

BRISEIDE

New project on BRIdging SErvices, Information and Data for Europe (BRISEIDE) launched.

The EU project BRISEIDE kicked off in a meeting held in Trento on 17-18 March, hosted by the Coordinator Graphitech. This new project aims at delivering:

- time-aware extension of data models developed in the context of previous/ongoing EU INSPIRE related projects (e.g. in the context of GMES, eContentPlus),
- application (e.g. Civil Protection) based on the integration of existing, user operational information and
- value added services for spatio-temporal data management, authoring, processing, analysis and interactive visualisation.

BRISEIDE will be applied, tested and validated within a Civil Protection application context, using the INSPIRE relevant themes, via a chain of stakeholders, data providers, technology partners, and downstream users. The Pilot operational phase will last 12 months and will consider real life events, with extensions in additional domains, being considered. Project services converge with Free & Open Source Software (FOSS) initiatives from the Open Source Geospatial Foundation (www.osgeo.org). This ensures further development and processing functionalities built on top of the BRISEIDE framework, to be extended by public administrations or private industries according to their specific needs. The BRISEIDE platform will be available on lease, thus ensuring economic sustainability and partners' investment recovery.

Within BRISEIDE different pilot projects will be developed, including a pilot experience on emergency resources management by EURADIN partners Government of Navarra and TRACASA.
